Oilfield Management Integration Service

Anton provides optimized Producing capacity development of O&G field and supporting services for clients to help maximize the value of assets for clients.

1. Oil & gas field development and construction services

Service content:

Undertake the implementation of production capacity construction of oil and gas fields, provide tech design of development plan for the whole oil and gas block or development unit, integrated drilling and production engineering, and general contraction for integrated ground engineering capacity construction, etc.

Anton's advantages:

- Own complete oilfield technical service industry chain and a full set of equipment resources of development and construction.
- Own rich experience in oilfield development engineering technical services.
- Own partners on large engineering design, ground engineering construction.

2. General contraction service for oil & gas field development management

Service content:

Aiming at oil and gas production and stable production operation, Anton provides integrated management general contraction for oilfield development, including reservoir support, operation management, production and operation, HSE, logistics, third-party service provider management, and so on.

Anton's advantages:

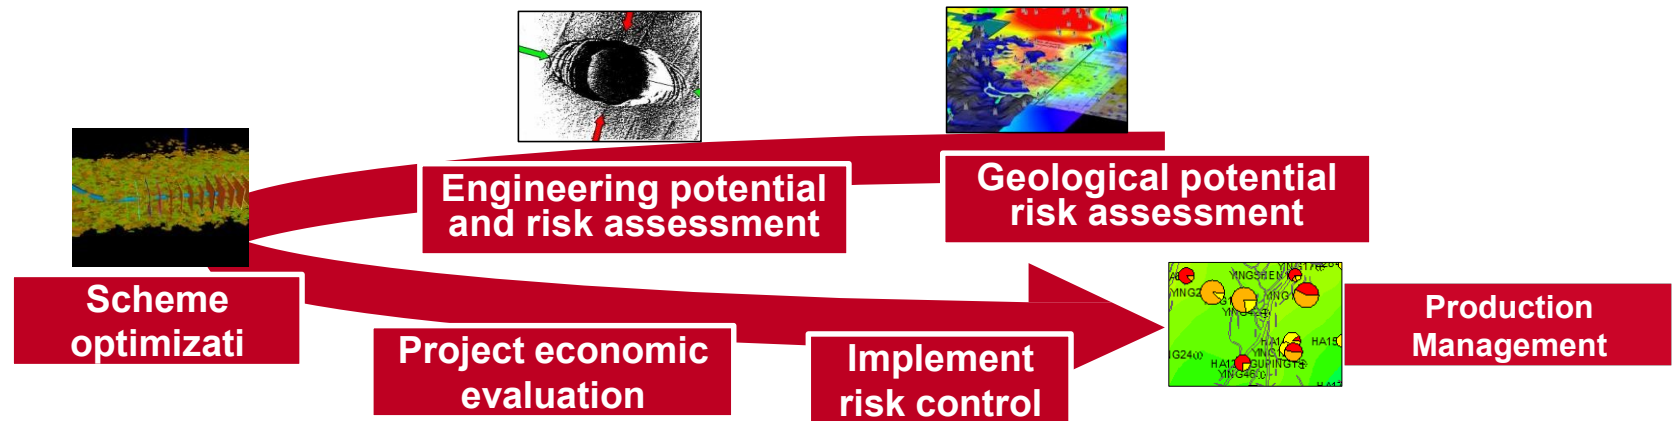

- Own a complete industry chain of oilfield technical services, providing systematic support for oilfield development.
- Own international technical service and management teams.
- Undertake integrated oilfield management of Majnoon oilfield in Iraq(IFMS), fully responsible for reservoir support and management, daily production and operation, maintenance services, operation supervision, oilfield IT, HSE, security, procurement and the management of third-party service providers. The project has been running smoothly for more than 200 days after taking over, and the output has been rising steadily, which has been highly praised by clients.

3. Oil & gas field production risk management

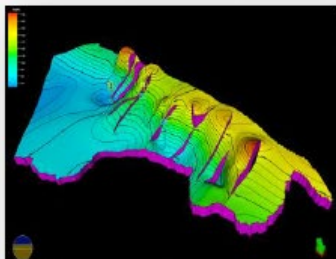

Service content:

Aiming at oil and gas production, provide a risk package service for a single well or block with service benefits linked to oil and gas production, including single well or block tapping potential services, assessment on increased production of block development and management projects, etc.

Anton's advantages:

- Own a professional reservoir analysis team, we can objectively evaluate and identify the capability of development and tapping potential.
- Own operation service team and supporting equipment on workover, fracturing, acidizing, oil production and so on.
- Develop services in domestic coalbed methane, shale gas, tight oil reservoirs, and oilfields in Pakistan and Albania.

4. Integrated Field Facilities Operations

Service content: Oil and gas field processing facilities, power plants, wellhead operation and maintenance management, oil and gas field process upgrading and transformation, operation and maintenance technical support, production facilities and equipment production services, oil and gas field operation and maintenance on-the-job training, etc.

10year experiences

ISO 9001:2015

ISO 14001:2015

OHSAS 18001:2007

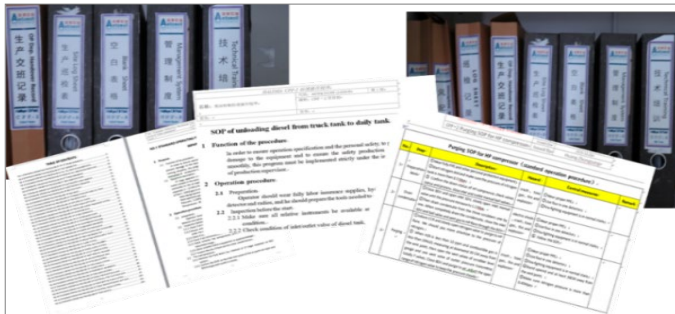

Anton's advantages:

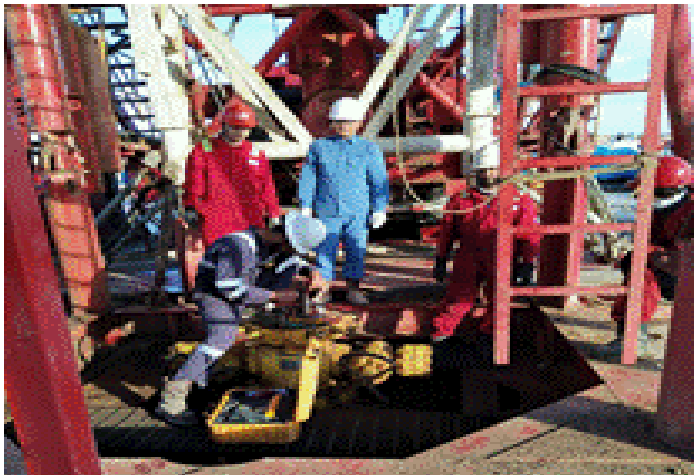

- ◆ Own complete management system and standard operating procedures.
- ◆ Professional and international human resources from 18 countries.
- ◆ Vast supplier cooperation resources and global supply chain capabilities.
- ◆ Rich field operation and comprehensive maintenance experience, total 1.6 million safety labor hours(WLTI) during operation and maintenance of oilfield facilities in Halfaya, West Qurna 2, Buzurgan, Badra and Majnoon oilfields in Iraq.

5. Supervision service

- Provide professional supervision personnel services in the fields of Oil & gas field development, such as earthquake, geology, drilling, workover, oil testing surface, and so on.
- Own complete management system and standard operating procedures.
- Own a global talent pool of nearly 400 supervisors, and it covers major disciplines in exploration and development.
- Anton has set up an international human resources service company in Dubai, which can provide a large number of high-quality and low-cost international human resources, mainly from India, Pakistan and Sudan.
- Own professional team of experts to provide strong remote and field solutions

- More than 160 supervisors are on duty, providing services in many projects, such as CNPCIC in Chad, Buzurgan in Iraq, Majnoon oilfield, Bankers project in Albania and so on.

6. Engineering Construction Maintenance Services

Service content:

Maintenance and Upgrading Services

- Static Equipments
- Rotating equipment (pump, compressor, air cooler and chemical injection skid, etc.)
- Oil and gas pipelines (Flow Line, Trunk Line, Long-Distance Pipeline etc.)
- Automatic control instrument facilities (panels, control cable, optical cable, field instruments, etc.)
- Power facilities (generator, power cables, transformers, switchgear, power transmission line, lighting, grounding, etc.)
- Anti-corrosion engineering
- Civil engineering (road, foundation, building, etc.)
- Procurement services

■ EPC Service

- EPC Services for the Oil & Gas Process Facility (Well Pad, Oil Gathering Manifold(OGM), Centre Process Facility(CPF),Flow Line, Truck Line, Long-Distance Pipeline Etc., etc.)
- EPC Services for the Water Treatment Facility (oily sewage treatment, Oil Field Water Injection, water supply and drainage, firefighting water system, etc.)
- EPC Services for Electrical, Communication, Automatic control system Facility (Transmission line, Substation facilities, CCTV, Perimeter Alarm System, Instrument Etc..)
- EPC Services for infrastructures (Roads and Bridge, Building, HVAC, Decoration etc.)
- Digital Oilfield EPC Projects

Anton's advantages:

■ Powerful Human Resources

During development of last several years , Our department gradually build a quick response team with rich international experience and can provide all kind service for oil and gas filed facility, include:

- Project Management Team

Include Contract management, Cost control, DCC, Safety, QA/QC ,Project manager etc.

- Senior Engineer For all Disciplines

Include Process, Piping, Welding, Mechanical, Electrical, Instrument, Communication, Civil, Anti-Corrossion

- Construction Team

Include Welder, Pipe Fitter, Electrician, Instrumentation, Sand Blaster, Painter, lathe man etc.

■ Stronger Overseas Support

Our department have a professional procurement and logistics team to allocate global resources , which have powerful network in Dubai, Basra/ Baghdad of Iraq, so we can response quickly.

Oilfield Management Integration Service

□ Oilfield operation management and productivity construction integrate service solutions

Oil Company manage the core business of oilfield, include the development strategy, investment strategy, financial operation, ANTON in charge of executing and managing oilfield development, assist customers maximize value of oil and gas assets.

- ◆ **Integration Organization** : Change the cooperation model of oil & gas development, the model is turnkey, it could decrease the cost and Increase economies of scale.
- ◆ **Integration cooperation** : Oil company and oilfield service company cooperate long term, it could decrease the communication cost, and we could adopt benefit and risk sharing business model.

□ Oil and gas projects joint investment and development solution

ANTON takes part or all of the development capital investment, and provide the oilfield management and integrate general contract services long term, share the risk and benefit with client.
