

Coiled Tubing for Closable Sliding Sleeve stage Frac Technology

The Coiled Tubing with bottom packer string to isolate the un-targeted zone and open the pre-set sliding sleeve for fracturing. This technology is able to fracture multiple zones in one trip. Anton provides advanced coiled tubing operation, specially designed for sliding sleeve and bottom packer working string as a perfect combination of continuous working and completion tools.

Technology Features

- Efficient and continuous fracturing with CT dragging working string to target zones.
- Sliding Sleeve can be repeatedly opened and closed according to production requirement.
- Unlimited fracturing stages and full-bore access.

Application Range

- Compatible with all kinds of wellbore sizes.
- Compatible with all kinds of well completion methods.

Service Performance

- Successfully conducted stages frac in one job.
