

# Anton Wireline Logging Technology

Anton Wireline Logging services including project design and logging & perforating, open hole logging consultant, production logging, fiber optical logging, perforation, and data interpretation. Cooperation with domestic and overseas a large number of advanced logging company. China market include Southwest, Northwest, Northeast area. Oversea market includes Iraq, Kazakhstan, Pakistan, and Chad. Anton advantage technology are fiber optical logging and pump down perforation & plug technology, which are logging industrial and technic development leader.

## Technological advantage

- Have fiber optical logging core technology
- Own experienced PDP team
- According to geological condition, matched autofit design capability
- Provide specific logging services, such as imaging, dipole sonic, formation test & sampling.

## Services capability

- Open hole logging, Super deep (more than 6000m) and high temperature (more than 200c) wells service capability
- Perforation services, long horizontal section (2800m) PDP service capability
- Production logging, experience in high H<sub>2</sub>S wells (more) than 17%
- Fiber optical logging, have temporary, semi-permanent, permanent services and data interpretation capability
