

Cooperative Development of Oil/Gas Fields

Anton provides risk-sharing services of specified technical services based on oil & gas production, or directly invests in oilfield development, and share risks and profits with the clients and partners.

Scope of Services

- Cooperative of undeveloped oilfield development.
- Cooperative of developed oilfield development and enhanced oil recovery.
- Risk-sharing technical services based on oil/gas production.

Service Capability and Advantages

- Professional reservoir analysis team to effectively assess and identify risk and development potential.
- Rich experiences on oilfield development construction project management and oilfield operation and production management.
- Rich financing channels and financial partners, which can provide financial support for cooperative development projects.
- Various professional teams such as geology, drilling, completion, oil production and surface construction, which can effectively combine geology and engineering to provide optimal potential tapping solutions and services.
- Specialized technologies for increasing production of various types of oil and gas reservoirs: fracturing sectional optimization technology for low-permeability and tight reservoirs, nanometer materials technology; thermal recovery and microbial technology for increasing oil production; and water-control technology for high-water-bearing reservoirs.

Service Tracking Records

- Services for CBM, tight reservoirs in China.
- Services for oil fields development in Pakistan and Albania.
