

TRS Technical Service

Anton TRS Services (Tubular Running Services) is a professional team that provides the advanced Tubular technical services in internal and abroad, and uses special equipment, professional technical personnel and strict technical standards to accurately monitor the tubular make-up torque and thread sealing performance, etc., this technology has the advantages of no damage to special steel tubular, optimal torque control of tubular reliable gas tight, etc., to ensure the safety and environmental protection of special oil and gas wells such as high pressure/high temperature/high sulfur, and use of extending the service life of the pipe string, saving development costs.

Technical Advantages

- Complete standard series of make-up tubular.
- Protect the tubing from damage with soft no-mark dies.
- Accurately monitor the running / retrieving torque to ensure the accuracy of the torque.
- Provide gas leaking inspection service to make sure the connection is sealed.

Application Range

- Tubular running / retrieving service.
- Torque monitor system service.
- Gas leaking inspection service.

Service Performance

- Provided more than 10000 wells in 8 domestic and foreign oil and gas fields including China, the Middle East, Africa and Latin America
